Tic Tac Toe by badServers

Tic Tac Toe is a web game, just like the original the rules are that each player takes a turn, the first player puts an 'x' in the 3x3 board and then the second player takes a turn and puts an 'o'. This goes on until either one of the player has put his mark in three slots horizontal, vertical or diagonal in a row or when the board is full, which would be a draw.

Features

- User can play the game with a friend or by himself.
- Message appears above the board that tells the user/s who's turn it is (X or O).
- Games stops if board is full or X or O marks are in a row, either horizontally, vertically or diagonally.
- Play again button clears board so user/s can play again.

Coding standards

- Tested on Windows 10
- Function names are Camel casing.
